## Syllabus for BSc (Basic and Honors), Semesters III

### Semester: III

Course Title: Object Oriented Programming Concepts and Programming in Java	Course code:21BSC3C3CS1L DSC3
Total Contact Hours: 56	Course Credits: 04
Formative Assessment Marks: 40	Duration of SEE/Exam: 02 Hours
Summative Assessment Marks: 60	

#### Course Outcomes (CO's):

At the end of the course, students will be able to:

- Explain the object-oriented concepts and JAVA.
- Write JAVA programs using OOP concepts like Abstraction, Encapsulation, Inheritance and Polymorphism.
- Implement Classes and multithreading using JAVA.
- Demonstrate the basic principles of creating Java applications with GUI.

**DSC3: Object Oriented Programming Concepts and Programming in Java**

Unit	Description	Hours
1	<b>Introduction to Java:</b> OOP paradigm , Basics concepts of OOP, applications and benefits of OOP, Java programming- History and evolution of java, basic structure, Data types, Variables, Operators, Control structures including selection, Looping, Java methods, Overloading, Math class, Arrays in java.	14
2	<b>Objects and Classes:</b> Basics of objects and classes in java, Constructors, Finalizer, Visibility modifiers, Methods and objects, Inbuilt classes like String, Character, String Buffer, Vectors , wrapper classes, File, this reference.	14
3	<b>Inheritance and Polymorphism:</b> Inheritance in java, Super and sub class, Overriding, Object class, Polymorphism, Dynamic binding, Generic programming, Casting objects, Instance of operator, Abstract class, Interface in java, Package in java, UTIL package, Multithreading in java: Thread life cycle and methods, Runnable interface, Thread synchronization, Exceptional handling mechanism. Exception handling with try, catch and finally.	14
4	<b>Event and GUI programming:</b> Event handling in java, Event types, Mouse and key events, GUI Basics, Panels, Frames, Layout Managers: Flow Layout, Border Layout, Grid Layout, GUI components like Buttons, Check Boxes, Radio Buttons, Labels, Text Fields, Text Areas, Combo Boxes, Lists, Scroll Bars, Sliders, Windows, Menus, Dialog Box, Applet and its life cycle.	14

**References:**

1. Programming with Java, By E Balagurusamy – A Primer, Fourth Edition, McGraw Hill Publication.
2. Core Java Volume I – Fundamentals, By Cay S. Horstmann, Prentice Hall.
3. Object Oriented Programming with Java: Somashekara M.T., Guru, D.S., Manjunatha K.S, 1<sup>st</sup> Edition, PHI Learning 2017.
4. Java 2 - The Complete Reference – McGraw Hill Publication.
5. Java - The Complete Reference, 7th Edition, By Herbert Schildt- McGraw Hill Publication, 2017.

Year	II	Course Code: 21BSC3C3CS1P	Credits	02
Sem.	III	Course Title: JAVA Lab	Hours	52
Formative Assessment Marks: 25		Summative Assessment Marks: 25		Duration of ESA: 03 hrs.

#### PART-A

1. Write a Programs using Different Control Structures (switch, if, shile, do, for etc.,)
2. Write a Programs using Arrays.
3. Write a Programs using Strings, String Buffer Classes and Vectors.
4. Write a Programs using constructor and destructor
5. Creation of classes and use Polymorphism feature.
6. Count the number of objects created for a class using static member function
7. Write a programs on Interfaces
8. Write a programs on Abstract classes.
9. Write a programs on packages
10. Write a programs using method overloading
11. Write a programs using method overriding
12. Write a programs on Multilevel Inheritance

#### PART-B

1. Write a program using same class name in different Packages
2. Write a program using exception handling mechanism.
3. Write a programs using AWT.
4. Write a Programs to create various GUI components
5. Write a Program on Text Fields and Areas
6. Write a Program on Windows and Menus (buttons, check boxes & labels)
7. Write a program multiple Inheritance with finally Keyword
8. Write a program to read & display content of plain text files.
9. Write a Multi-threading program & explore all built-in methods of threads
10. Write a program to append an element to the end of collection linked list & display the content.
11. Write a programs to display "Hello Java Beans" using JavaBean class.
12. Write a program to display using built-in functions of Vector.

**Note:** Student has to execute a minimum of 10 programs in each part to complete the Lab course

## SEC Model - 1

### Skill Enhancement Course: SEC for B.Sc. & other Subject Students

**Semester: III/IV**

Course Title: <b>Artificial Intelligence</b>	Course Credits: 2
Total Contact Hours: 13 hours of theory and 26 hours of practical	Duration of ESA: 01 Hour
Formative Assessment Marks: 20 marks	Summative Assessment Marks: 30 marks

#### Course Outcomes (COs):

At the end of the course, students will be able to:

- Appraise the theory of Artificial intelligence and list the significance of AI.
- Discuss the various components that are involved in solving an AI problem.
- Illustrate the working of AI Algorithms in the given contrast.
- Analyze the various knowledge representation schemes, Reasoning and Learning techniques of AI.
- Apply the AI concepts to build an expert system to solve the real-world problems.

#### Course Content (Artificial Intelligence)

	Details of topic	Duration
<b>Course - 1 - Azure AI Fundamentals (AI-900)</b>	AI-900 pathway consists of 5 courses and 2 reading material: i. Introduction to AI on Azure ii. Use visual tools to create machine learning models with Azure Machine Learning iii. Explore computer vision in Microsoft Azure iv. Explore natural language processing v. Explore conversational AI vi. Tune Model Hyperparameters - Azure Machine Learning (Reading) vii. Neural Network Regression: Module Reference - Azure Machine Learning (Reading)	05 hours
<b>Practical</b>	1. Prepare the data 2. Model the data 3. Visualize the data 4. Analyse the data 5. Deploy and maintain deliverables	13 hours

PTO

<b>Course – 2 - Data Analyst Associate (DA-100)</b>	<b>DA-100 pathway consists of 5 courses and 2 reading material:</b> <ol style="list-style-type: none"> <li>1. Get started with Microsoft data analytics</li> <li>2. Prepare data for analysis</li> <li>3. Model data in Power BI</li> <li>4. Visualize data in Power BI</li> <li>5. Data analysis in Power BI</li> <li>6. Manage workspaces and datasets in Power BI</li> <li>7. Key Influencers Visualizations Tutorial - Power BI</li> <li>8. Smart Narratives Tutorial - Power BI   Microsoft Docs</li> </ol>	08 hours
<b>Practical</b>	<ol style="list-style-type: none"> <li>1. Describe Artificial Intelligence workloads and considerations</li> <li>2. Describe fundamental principles of machine learning on Azure</li> <li>3. Describe features of computer vision workloads on Azure</li> <li>4. Describe features of Natural Language Processing (NLP) workloads on Azure</li> </ol>	13 hours

**References to learning resources:**

1. The learning resources made available for the course titled “Azure AI Fundamentals (AI-900) and Data Analyst Associate (DA-100).” on Future Skills Prime Platform of NASSCOM.

**Pedagogy**

Flipped classroom pedagogy is recommended for the delivery of this course.

For every class:

1. All the faculty who takes this class should go for a Faculty Development Program on these before starting the session.
2. Faculty needs to introduce this course to the students then students need to start learning from Future Skills PRIME platform.
3. Faculty also needs to explain the course outcomes and needs of the course and why it is needed for the students.
4. Then students need to start learning online after registering on the platform.
5. Classroom activities are designed around the topic of the session towards developing better understanding, clearing doubts and discussions of high order thinking skills like application, analysis, evaluation, and design.
6. Every theory class ends with announcement of exercise for practical activity of the week.

**Exercises:**

Practical Exercises	Weightage in marks
After each chapter students' needs to complete exercises based on the learning in Azure environment.	No Weightage (But students need to complete it to move to next chapter) .

**Assessment:**

<b>Formative Assessment</b>	
<b>Assessment Occasion</b>	<b>Weightage in Marks</b>
1. Summative Assessment: After completion of both the courses, the student can optionally give Assessment for each of the courses on Future Skills Prime platform. Students will have two attempts and those who score at least 50% marks per course will get certificate from NASSCOM-MeitY.	This assessment may be given 50% weight in computing the final grade of the students.

**Open Elective for III Semester**  
**ELECTRONIC COMMERCE: OEC3**

Course Title: <b>E-Commerce</b>	Course Credits: 3 (3L+0T+0P)
Semester: III	Duration of SEE: 02 Hour
Total Contact Hours: 42	SEE: 60 Marks IA: 40 Marks

**Course Outcomes:**

- Compare how internet and other information technologies support business processes.
- Demonstrate an overall perspective of the importance of application of internet technologies in business administration
- Explain the basic business management concepts.
- Demonstrate the basic technical concepts relating to E-Commerce.
- Identify the security issues, threats and challenges of E-Commerce.

**UNIT I Introduction to E-Commerce and Technology** **14 Hrs**

Working of Web - HTML Markup for Structure - Creating simple page - Marking up text - Adding Links - Adding Images - Table Markup - Forms - HTML5. **Infrastructure Building an E-Commerce Website:** Systematic approach to build an E-Commerce: Planning, System Analysis, System Design, Building the system, Testing the system, Implementation and Maintenance, Optimize Web Performance – Choosing hardware and software – Other E-Commerce Site tools

**UNIT II Mobile Site and Apps ,E-Commerce Security and Payment Systems** **14 Hrs**

Developing a Mobile Website and Mobile App, E-Commerce Security Environment – Security threats in E-Commerce – Technology Solutions: Encryption, Securing Channels of Communication, Protecting Networks, Protecting Servers and Clients – Management Policies, Business Procedure and Public Laws- Payment Systems.

**UNIT III Business Concepts in E-Commerce** **14 Hrs**

Digital Commerce Marketing and Advertising strategies and tools – Internet Marketing Technologies – Social Marketing – Mobile Marketing – Location based Marketing – Ethical, Social and Political Issues in E-Commerce. **Project Case Study:** Case Study: Identify Key components, strategy, B2B, B2C Models of E-commerce Business model of any e-commerce website - Mini Project: Develop E-Commerce project in any one of Platforms like Woo-Commerce, Magento or Opencart.

**TEXT BOOK:**

## Syllabus for BSc (Basic and Honors), Semesters IV

Course Title: Database Management System	Course code: 21BSC4C2CS2L DSC4
Total Contact Hours: 56	Course Credits: 03
Formative Assessment Marks: 40	Duration of SEE/Exam: 02 Hours
Summative Assessment Marks: 60	

### Course Outcomes (CO's):

At the end of the course, students will be able to:

- Explain the various database concepts and the need for database systems.
- Identify and define database objects, enforce integrity constraints on a database using DBMS.
- Demonstrate a Data model and Schemas in RDBMS.
- Identify entities and relationships and draw ER diagram for a given real-world problem.
- Convert an ER diagram to a database schema and deduce it to the desired normal form.
- Formulate queries in Relational Algebra, Structured Query Language (SQL) for database manipulation.
- Explain the transaction processing and concurrency control techniques.

### DSC7: Database Management System (DBMS)

Unit	Description	Hours
1	<b>Database Architecture:</b> Introduction to DBMS, database system vs. file system, applications of DBMS. Characteristics and Purpose of database approach. People associated with Database system. Data models. Database schema. Database architecture. Data independence. Database languages, interfaces, and classification of DBMS.	14
2	<b>E-R Model:</b> Entity-Relationship modeling; E – R Model Concepts: Entity, Entity types, Entity sets, Attributes, Types of attributes, key attribute, and domain of an attribute. Relationships between the entities. Relationship types, roles and structural constraints, degree and cardinality ratio of a relationship. Weak entity types, E -R diagram.	14
3	<b>Relational Data Model:</b> Relational model concepts. Characteristics of relations. Relational model constraints: Domain constraints, key constraints, primary & foreign key constraints, integrity constraints and null values.	14

	Relational Algebra: Basic Relational Algebra operations. Set theoretical operations on relations. JOIN operations Aggregate Functions and Grouping. Nested Sub Queries-Views. <b>SQL:</b> Background, Basic structure, set operation, aggregate functions, NULL values, sub queries, views in SQL. Introduction to PL/SQL, data types, identifiers, operators and expressions, conditional statements, iterative statements.	
4	<b>Data Normalization:</b> Anomalies in relational database design. Decomposition. Functional dependencies. Normalization. First normal form. Second normal form, Third normal form. Boyce-Codd normal form. Transaction Management: Introduction Transaction Processing. Single user & multiuser systems. Transactions: read & write operations. Desirable properties (ACID properties) of Transactions.	14

Year	II	Course Code: 21BSC4C2CS2P	Credits	02												
Sem.	IV		Hours	52												
Formative Assessment Marks: 25		Summative Assessment Marks: 25	Duration of ESA: 03 hrs.													
Practical's:		CO: Student would be able to create tables, execute queries and PL/SQL programs.														
<b>Part A</b>																
1. Create a table called Employee with the following structure.																
<table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Name</th> <th>Type</th> </tr> </thead> <tbody> <tr> <td>Empno</td> <td>Number</td> </tr> <tr> <td>Ename</td> <td>Varchar2(20)</td> </tr> <tr> <td>Job</td> <td>Varchar2(20)</td> </tr> <tr> <td>Mgr</td> <td>Number</td> </tr> <tr> <td>Salary</td> <td>Number</td> </tr> </tbody> </table>					Name	Type	Empno	Number	Ename	Varchar2(20)	Job	Varchar2(20)	Mgr	Number	Salary	Number
Name	Type															
Empno	Number															
Ename	Varchar2(20)															
Job	Varchar2(20)															
Mgr	Number															
Salary	Number															
<ul style="list-style-type: none"> <li>a. Add a column commission with domain to the Employee table.</li> <li>b. Insert any five records into the table.</li> <li>c. Update the column details of job</li> <li>d. Rename the column of Employ table using alter command.</li> <li>e. Delete the employee whose empno is 19.</li> </ul>																
2. Create department table with the following structure.																
<table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Name</th> <th>Type</th> </tr> </thead> <tbody> <tr> <td>Deptno</td> <td>Number</td> </tr> <tr> <td>Deptname</td> <td>Varchar2(20)</td> </tr> <tr> <td>location</td> <td>Varchar2(20)</td> </tr> </tbody> </table>					Name	Type	Deptno	Number	Deptname	Varchar2(20)	location	Varchar2(20)				
Name	Type															
Deptno	Number															
Deptname	Varchar2(20)															
location	Varchar2(20)															
<ul style="list-style-type: none"> <li>a. Add column designation to the department table.</li> <li>b. Insert values into the table.</li> <li>c. List the records of emp table grouped by deptno.</li> <li>d. Update the record where deptno is 9.</li> <li>e. Delete any column data from the table.</li> </ul>																
3. Create a table called Customer table																
<table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Name</th> <th>Type</th> </tr> </thead> <tbody> <tr> <td>Cust. name</td> <td>Varchar2(20)</td> </tr> <tr> <td>Cust. street</td> <td>Varchar2(20)</td> </tr> <tr> <td>Cust. city</td> <td>Varchar2(20)</td> </tr> </tbody> </table>					Name	Type	Cust. name	Varchar2(20)	Cust. street	Varchar2(20)	Cust. city	Varchar2(20)				
Name	Type															
Cust. name	Varchar2(20)															
Cust. street	Varchar2(20)															
Cust. city	Varchar2(20)															
<ul style="list-style-type: none"> <li>a. Insert records into the table.</li> <li>b. Add salary column to the table.</li> <li>c. Alter the table column domain.</li> <li>d. Drop salary column of the customer table.</li> <li>e. Delete the rows of customer table whose cust. city is 'CTA'</li> </ul>																

4. Create a table called branch table.

Name	Type
Branch name	Varchar2(20)
Branch city	varchar2(20)
Asserts	Number

- Increase the size of data type for asserts to the branch.
- Add and drop a column to the branch table.
- Insert values to the table.
- Update the branch name column
- Delete any two columns from the table
- Delete the row of the table with some condition.

#### QUERIES USING DDL AND DML

- Create a user and grant all permissions to the user.
  - Insert the any three records in the employee table and use rollback. Check the result.
  - Add primary key constraint and not null constraint to the employee table.
  - Insert null values to the employee table and verify the result.
- Create a user and grant all permissions to the user.
  - Insert values in the department table and use commit.
  - Add constraints like unique and not null to the department table.
  - Insert repeated values and null values into the table.
- Create a user and grant all permissions to the user.
  - Insert values into the table and use commit.
  - Delete any three records in the department table and use rollback.
  - Add constraint primary key and foreign key to the table.

#### QUERIES USING AGGREGATE FUNCTIONS

- By using the group by clause, display the enames who belongs to deptno 10 along with average salary.
  - Display lowest paid employee details under each department.
  - Display number of employees working in each department and their department number.
  - Using built in functions, display number of employees working in each department and their department name from dept table. Insert deptname to dept table and insert deptname for each row, do the required thing specified above.
  - List all employees which start with either B or C.
  - Display only these ename of employees where the maximum salary is greater than or equal to 5000.
- Calculate the average salary for each different job.
  - Show the average salary of each job excluding manager.
  - Show the average salary for all departments employing more than three people.
  - Display employees who earn more than the lowest salary in department 30
  - Show that value returned by sign (n) function.

	<p>f. How many days between day of birth to current date.</p> <p>10. a. Show that two substring as single string.  b. List all employee names, salary and 15% rise in salary.  c. Display lowest paid emp details under each manager  d. Display the average monthly salary bill for each deptno.  e. Show the average salary for all departments employing more than two people.  f. By using the group by clause, display the eid who belongs to deptno 05 along with average salary.</p> <p>11. a. Count the number of employees in department 20  b. Find the minimum salary earned by clerk.  c. Find minimum, maximum, average salary of all employees.  d. List the minimum and maximum salaries for each job type.  e. List the employee names in descending order.  f. List the employee id, names in ascending order by empid.  g. Delete any three records in the department table and use rollback.  h. Add constraint primary key and foreign key to the table.</p> <p>12. a. Create a user and grant all permissions to the user.  b. Use revoke command to remove user permissions.  c. Change password of the user created.  d. Add constraint foreign key and not null.</p> <p>13. a. Create a user and grant all permissions to the user.  b. Update the table reserves and use savepoint and rollback.  c. Add constraint primary key , foreign key and not null to the reserves table  d. Delete constraint not null to the table column.</p>
--	---

**Part B:**

**PROGRAMS ON PL/SQL**

1. a. Write a PL/SQL program to swap two numbers.  
b. Write a PL/SQL program to find the largest of three numbers.
2. a. Write a PL/SQL program to find the total and average of 6 subjects and display the grade.  
b. Write a PL/SQL program to find the sum of digits in a given number.
3. a. Write a PL/SQL program to display the number in reverse order.  
b. Write a PL / SQL program to check whether the given number is prime or not.
4. a. Write a PL/SQL program to find the factorial of a given number.  
b. Write a PL/SQL code block to calculate the area of a circle for a value of radius varying from 3 to 7. Store the radius and the corresponding values of calculated area in an empty table named areas, consisting of two columns radius and area.
5. a. Write a PL/SQL program to accept a string and remove the vowels from the string. (When „hello“ passed to the program it should display „Hll“ removing e and o from the world Hello).  
b. Write a PL/SQL program to accept a number and a divisor. Make sure the divisor is less than or equal to 10, Else display an error message. Otherwise Display the remainder in words.

### PROCEDURES AND FUNCTIONS

1. Write a function to accept employee number as parameter and return Basic +HRA together as single column.
2. Accept year as parameter and write a Function to return the total net salary spent for a given year.
3. Create a function to find the factorial of a given number and hence find NCR.
4. Write a PL/SQL block to print prime Fibonacci series using local functions.  
Create function to the reverse of given number.

### CURSORS

1. Write a PL/SQL block that will display the name, dept no, salary of first highest paid employees.
2. Write a PL/SQL block that will display the employee details along with salary using cursors.
3. To write a Cursor to display the list of employees who are working as a Managers or Analyst.
4. To write a Cursor to find employee with given job and deptno.
5. Write a PL/SQL block using implicit cursor that will display message, the salaries of all the employees in the „employee“ table are updated. If none of the employee's salary are updated we get a message 'None of the salaries were updated'. Else we get a message like for example, 'Salaries for 1000 employees are updated' if there are 1000 rows in „employee“ table.

**Note:** Student has to execute a minimum of 10 programs in each part to complete the Lab course

**Open Elective for IV Semester**  
**Python Programming Concepts: OEC4**

Course Title: <b>Python Programming Concepts</b>	Course Credits: 3 (3L+0T+0P)
Semester: IV	Duration of SEE: 02 Hour
Total Contact Hours: 42	SEE: 60 Marks IA: 40 Marks

**Course Outcomes:**

- Explain the fundamentals of Computers.
- Explain the basic concepts of Python Programming.
- Demonstrate proficiency in the handling of loops and the creation of functions.
- Identify the methods to create and store strings.

**UNIT I Fundamentals of Computers**

**14 Hrs**

Introduction to Computers - Computer Definition, Characteristics of Computers, Evolution and History of Computers, Types of Computers, Basic Organisation of a Digital Computer; Number Systems-- different types, conversion from one number system to another; Boolean Algebra – Boolean Operators with Truth Tables; Types of Software – System Software and Utility Software; Computer Languages - Machine Level, Assembly Level & High Level Languages, Translators; Assembler, Interpreter and Compiler; Planning a Computer Program – Algorithm and Flow chart with Examples.

**UNIT B Python Basics**

**14 Hrs**

Introduction to Features and Applications of Python; Python Versions; Installation of Python; Python Command Line mode and Python IDEs; Simple Python Program, Identifiers; Keywords; Statements and Expressions; Variables; Operators; Precedence and Association; Data Types; Indentation; Comments; Built-in Functions- Console Input and Console Output, Type Conversions; Python Libraries; Importing Libraries with Examples; Illustrative programs. **Python Control Flow:** Types of Control Flow; Control Flow Statements- if, else, else if, while loop, break, continue statements, for loop Statement; range() and exit() functions; Illustrative programs.

**UNIT IV Python Functions & Strings**

**14 Hrs**

Types of Functions; Function Definition- Syntax, Function Calling, Passing Parameters, Arguments, the return statement; Default Parameters; Command line Arguments; Program Arguments; Illustrative programs.

String Handling and Storing Strings; Accessing String Characters; the str() function; Operations on Strings- Concatenation, Comparison, Slicing and Joining, Traversing; Format Specifiers; Escape Sequences; Raw and Unicode Strings; Python String Methods; Illustrative programs.
